

## IDEAS OF “ANTI-IGNORANCE ENLIGHTENMENT” IN HIGH-CLASS STUDENTS

Isaquolov Mamadoli Ruzimurodovich

Senior Teacher Of The Pedagogical Department Of Jizzakh State Pedagogical Institute,  
Uzbekistan

**ABSTRACT:** - This article analyzes the use of concepts associated with educating secondary schools students in the spirit of anti-ignorance enlightenment.

**KEYWORDS:** Ignorance, enlightenment, inferiority, anti-ignorance enlightenment, innovation, socialization, social relations, social activity.

### INTRODUCTION

The global processes of globalization, the need for innovative society, the development of Science and technology also create great opportunities for high-class students. The leader of our state is idiomatic paying attention to young people."Where, from our work in the which position, we need to talk to our children and find their way to their hearts, be aware of their behavior, be aware of their behavior. Actually, we should pay attention to the unorganized youth in morality. Because people, a child who is ignored by society, will be a upset. Who is interested in what he is drawn to, seeks to

look at this or that or that or that or that or that or that or that or that or that or that or that or that or that.

In a word, let our people follow the proverb "seven neighbourhoods to one child are both father and mother." An alien child in society for us should not be sick and. All of them are children of our own, Uzbekistan. In fact, if we show kindness, teach work, science, profession, noble qualities, open their way, tomorrow's benefit will touch ourselves, our society. Otherwise, the fact that they become a weapon in the hands of others is not. [1]

**“IDEAS OF “ANTI-IGNORANCE ENLIGHTENMENT” IN HIGH-CLASS STUDENTS”**

The opportunities created also put a number of requirements before the teachers of the upper classes. For example, we can come up with such requirements as the ability to make quick decisions, the opportunity to give innovative ideas, the ability to increase spiritual potential, the achievement of spiritual perfection in the further enrichment of their knowledge on “anti-ignorance enlightenment”.

Ignorance, anger, ignorant (Arabic. ignorance, ignorance) - 1) without knowledge, backward, uncultured; 2) negative moral quality, which gives freedom to anger, expresses the characteristics inherent in a person who can not handle himself. An ignorant person is a person who relies only on a certain issue, on his physical strength in solving the problem, gives freedom to anger, can not handle himself, is a morally ignorant person.[3,4] ignorance means that we are not mistaken if we say that ignorance is an illiterate attitude to the policy pursued in the field of Education, Culture and spirituality, economy and politics.

And enlightenment is an activity aimed at raising the consciousness, knowledge of people on the basis of a set of educational, cultural, spiritual, economic and political ideas.

Today, when working with high-class students on the concepts of “education against ignorance”, it is necessary to carry out important work on the state policy on youth and its implementation. In this main issue one of the problems encountered in the lives of young people growing up is hindrance. These barriers are noticeable in psychological, social manifestations. The question of finding a solution to it is reflected in the concept of “youth of Uzbekistan – 2030”.

Through a system aimed at understanding the purpose of the” youth of Uzbekistan – 2030 ”

concept, increasing their intellectual capabilities, raising their spiritual level, the skills of being able to resist ignorance are formed. “The objective of the concept is to actively involve young people in the Democratic, political and economic reforms carried out in the country, to create the right conditions for the realization of their potential, to ensure effective protection of their rights and freedoms, legitimate interests, to increase the spiritual and professional level of young women, to realize their spiritual and creative potential”[2]. In this classroom teacher or science teacher should explain the meaning of the following concepts to the students.

These are such concepts as: democracy, politics, economy, reform, activity, capacity, conditions, law, freedom, law, interest, spirituality, professional level, social and creative potential. The teachers of the upper classes also touch upon the concepts that contradict them in breaking the content of these concepts into the minds and hearts of the teachers of the upper classes, and the corresponding artistic films, clips, killer, spiritual and educational activities, radio broadcasts and TV shows will only achieve the effect of this.

In order to achieve the goal set before us, we must again integrate the main tasks of the state policy on youth into the consciousness of the youth of the concept of “youth of Uzbekistan – 2030”. These are:

First of all, it is important that young people are able to carry out their tasks to further develop their interest in culture, art, sports, information technology and book reading in order to immerse them in the minds of young people.

Secondly, it is necessary to facilitate the comprehensive socialization of young people, employment, also draw up plans that must be

#### **“IDEAS OF “ANTI-IGNORANCE ENLIGHTENMENT” IN HIGH-CLASS STUDENTS”**

clearly implemented in order to organize their leisure time meaningfully. For example, what should be reflected in the plans that lead to the comprehensive socialization of students. First of all, it is necessary to convey the content of the following concepts to the readers.

"Social relations are the criteria of mutual debate and behavior that find a decision between different subjects as a result of material and spiritual activities in the life of society. Social relations are divided into material and spiritual relations. The development of material blessings is the basis of the survival and development of society. The reason for this is the most optimistic development of social relations and economic relations. All social relations - political, legal, moral, religious, etc. determines the characters of the relationship. Understanding that all social relations are tied to functional interpersonal relations has allowed to scientifically interpret the legalities of the historical development of society." [3]

Thirdly, the effective use of innovative pedagogical technologies in working on this concept is essential. Students should know that in the process of relationships, work is carried out in a positive, negative way. To search for this, it is necessary to use the capabilities of Information Communication Technologies. Students should understand that the application of creative work in the process of social relations is the foundation for the development of society. Then we also need to work on this concept, so that we can formulate the skills of social activity.

"Social activity is the participation of social entities (society, strata, groups; and individuals) in socio-political processes, labor and cultural and educational activities, striving to fully implement the rights and duties set forth in the law. Social activity is

the main condition for a person to find his place in society and consciously manage his behavior. There are three types of social activity: in socio-political processes and culture, in labor and in the sphere of life. Cocktail activity is manifested in the field of Labor Relations and arises in connection with the professional-social task of the subject. It is recognized as the main, defining type of social activity. Its forms are as follows: austerity, effort for superintendency, participation in scientific and technical creativity, rationalization, ingenuity and other actions." [3]

In order for us to fully engage high school students in the educational process, we need to formulate social activity in them. When the students perform the given task in a timely manner, when they are actively moving. Adapting to the timely execution of training assignments one of the actions aimed at preventing invalid gait, we will not be mistaken.

"Socialization is a concept that means that any event, individual, or action becomes an embodiment of social relations, becoming an embodiment of the social essence, becoming a genius to many.[3]

Therefore, taking into account the fact that young people are focused on the comprehensive support of innovative ideas and initiatives, it is necessary to take into account the ideas of innovation in the field of education against ignorance and to apply them to practice.

From the four, it is envisaged to achieve the goal by forming knowledge and skills aimed at preventing negative situations encountered among young people, preventing violations and increasing the effectiveness of profilactic work aimed at a sharp reduction in crime by preventing high-class students from exactly

those negative situations that are encountered in society.

Five, it is the goal of the organization of the school theater studio, the school cinema studio by establishing a wide use of the opportunities of the upper class students in the work aimed at supporting the initiatives of the volunteers among young people, the implementation of measures aimed at the effective organization of their activities.

Six, In the work aimed at creating the image of the hero of the present day, who is free-thinking, businessman, entrepreneur and with a high intellectual potential, through a creative, critical and analytical vision, teachers of secondary schools prepare a generous course with high-class students and show the image of the hero of the present day in their territories.

From seventh, in ensuring the performance of work aimed at making physical education and sports an integral part of the youth lifestyle, an integral part of a healthy lifestyle is also the consciousness of the upper-graders, making physical education and sports an integral part of the day. In addition to ensuring active participation in sports clubs, it is noted that he will go to competitions and show results is the main status.

Eighth, to change the worldview of each student in order to carry out systematic work aimed at raising the ecological culture of young people, improving environmental education, to contribute to the prosperity of the world that surrounds us.

Nine, the possibility of a limited, young people in need of social protection of orphans and children deprived of parental care under the children aimed at promoting the spiritual and material aspects attract pupils from high school to work, then social spiritual help children to realize the main tasks of the

organization are to give readers the idea that today's high grade enlightenment you go through when against can perform.

To achieve a higher level of their spirituality by organizing creative work on such topics as "my neighborhood", "my school", "my village", "my city", "my family", " my friend", " my teacher" among high-class students of secondary schools.

It is important to achieve an improvement in the direction of creative activities of senior students through the investigation of creative studios in the secondary schools.

By carrying out the following works in the direction of educating high class students in the spirit of respect for universal and national values, loyalty to the motherland, anti-ignorance education ideas will be implemented. These are: reproduction of materials that serve to form a sense of respect for national-spiritual values in the minds of senior students in the mass media, social networks; carrying out systematic propaganda and propaganda work aimed at preventing young people in our country from falling under the influence of various foreign ideas against our mentality, strengthening peace and tranquility, it is being discovered as the most active members of the society by attracting high-class students to the work on youth participation in the fight against various risks, instilling hatred against ignorance in the minds and hearts of each student, as well as by holding mass educational activities that serve to increase the aspiration and intellectual salutations towards enlightenment and by
