ABSTRACT: - This article is aimed at blocking the path of action by spreading various narcotic substances that are inherited from our people and encroach on the rich values of our people.

KEYWORDS: Ancestral heritage, values, drugs, modern youth education.

INTRODUCTION

At the time when strong ideological attacks and spiritual threats against our youth are increasing, it is important to study the rich and valuable values that are inherited from our ancestors.

Abdurrahman Jami, who was Alisher Navoi's mentor and wise advisor, called upon the youth to be faithful and conscientious and follow the spiritual and moral values left by their ancestors 550 years ago:

If you are honest, you will be the ruler of the country.

You will be a priceless gem.

Seek the truth, choose the truth, see the truth,

Speak the truth, hear the truth and walk the truth.

Don't worry about what's fleeting.

Don't worry, don't worry.

“APPRECIATING AND FOLLOWING THE HERITAGE OF ANCESTORS IS THE NEED OF THE HOUR”

All of the above-mentioned opinions of sage Abdurrahman Jami warned and emphasized five centuries ago serve as a meaningful force in understanding the essence of the events taking place in the world and in understanding the true motives of the threats from the West.

The Islam that emerged in Iraq and Syria is an extremely irresponsible movement that has nothing to do with the state's Muslim religion and its teachings. They defamed the religion of Islam religiously, morally and spiritually, and are doing so at the expense of the financial and military support of "certain abstract" forces. Their unconscious behavior only serves to further increase the artificially widespread Islamophobia in the Western world. With this, they are breaking the peace in the era of globalization, strengthening the harmony between nations and peoples. Although ISIS has been eliminated from Iraq and Syria as a very dangerous force, they continue to threaten neighboring countries by standing in the territory of Afghanistan and Pakistan. They remain in possession of large quantities of weapons. They continue to pose a great threat to peace due to the economic and military support of a number of their Western allies and ultra-reactionary forces. For them, there are no holy values, neither Islamic nor human. That is why young people in many countries of the world who have not yet realized their identity and the value of their lives continue to come and join them.

As the great Chinese philosopher Wang Shouzen said, "A perfect person cares for everyone to be perfect." And they only think about continuing to enjoy themselves.

Imam Abu Hamid al-Ghazali said that four qualities mean that a person is good and good. Muhammad (peace be upon him) writes about this:

1. To give zakat in times of plenty (rich and poor) and charity in times of scarcity.

2.. To lose one's temper in anger.

3. To fix a flaw you see in a person without spreading it around.

4. Be kind and generous to family members, relatives, neighbors, and others.

A judge was asked: "What is the remedy to keep people away from you?" He said, "With patience and gentleness." And from him: "How to solve difficult things"? they asked. He said again: "With patience and gentleness!" he answered.

According to the above-mentioned opinion of the sage Abu Hamid Ghazali, it shows that it is appropriate for our modern youth to convey the values inherited from our ancestors to our young men and women and to break them into their hearts.

June 26 - as the international day of fight against abuse of narcotics and their illegal circulation, as a result of joint and cooperative efforts of the law enforcement agencies of our republic, 775 kg of drugs were seized this year. opium, 309 kg. marijuana, more than 133 kg of heroin, more than 93 kg of cannabis, 84 kg. poppies, as well as large quantities of poppy and cannabis plants, drugs in the form of pills and solutions were burned. Since May 1994, 104 tons of drugs have been burned in our country and the lives of millions of young people have been saved. In neighboring Afghanistan, 80-85% of the world's "killer poison" is being produced, and there are constant attempts to import it to us, mainly from Tajikistan, Kyrgyzstan, and directly from Afghanistan. As a result of well-directed comprehensive measures against any narcotics entering our country, a strong and reliable barrier was created to prevent the "seed of death". In our republic, the number of drug-related crimes and the number of people suffering from drug addiction have decreased every year. In 2019, compared to 2015, the

“APPRECIATING AND FOLLOWING THE HERITAGE OF ANCESTORS IS THE NEED OF THE HOUR”

number of 18-19-year-old patients with drug addiction decreased by 7.2 times.

Uzbekistan also conducts effective cooperation with the United Nations Office on Drugs and Crime, the Organization for Security and Cooperation in Europe, the World Customs Organization, Interpol and other prestigious international organizations. Uzbekistan's experience in this regard is gaining importance for other countries.

All the massacres in Iraq and Syria were directly related to drugs. Addiction separates a person from intelligence and drags him into the mire of pleasure and ignorance. We have seen in the activity of ISID members that people who are used to using narcotic substances become mentally incapable of responding to their efforts and opinions, and cannot realize that what they are doing is a serious crime. That 's why it was not for nothing that they showed the crimes committed in Iraq and Syria to the whole world via the Internet. While these are reports to justify the material and military support they receive from others, on the other hand, the spread of Islamic religion and culture around the world continues to worry their sponsors. Thirdly, some simple and uneducated young men and women join them to participate in the so-called jihad, and some girls and women believe in the false explanations promised in the "sexual jihad they proclaim" and make themselves a group of ignorant and criminal, bloodthirsty drug addicts, and then waste their bodies. they sacrificed their lives.

We can see how dangerous and dangerous a disease drug addiction is in society, as an example of what happened in Afghanistan, Iraq and Syria.

Not only among the youth of Islamic countries, but also in almost all countries of the world, drugs called "ogu", "killer poison" and "black death" bring a huge amount of income to

those who distribute them (in Afghanistan, 1 kilogram is 300 dollars, if it is delivered to neighboring countries, it is 1500 dollars in Tajikistan and Kyrgyzstan). -2000, in Kazakhstan for 5000, in Russia for 10000-15000, if delivered to European countries, it is paid at 25000 dollars and even higher), on the other hand, these substances are specially distributed to the children of rich families, and they become incurable drug addicts.

Youth is a special period in a person's life. Its psychological and physiological characteristics make boys and girls weak and vulnerable to the "black death". The distributors of "black death" themselves do not consume at all, but they lure some incompetent young people into the drug trap and take their lives. In our country, we also meet people who distribute drugs and lead astray some of our countrymen and youth who are the future of the country. We are all united against them, calling the younger generation to the right path, strengthening the promotion of a healthy lifestyle , sports and art among them, every family, secondary schools, vocational colleges, academic lyceums, community gatherings and the general public. it is necessary to be constantly aware of it and make our practical efforts systematic. The policy of our President Sh. Mirziyoyev to involve our youth in useful work is bearing its results. Every year, it allocates a huge amount of funds to support the activities of young entrepreneurs and farmers. Some of our young people, who have managed to use these funds wisely, make a great contribution not only to their families, but also to the economic power of their country, to the better living of their people, and to the creation of new jobs.

With his intelligence and high spirituality, man is greater and more honorable than all creatures of nature. With his creative qualities, he should be the preserver and guardian of mother nature, because he is our main

“APPRECIATING AND FOLLOWING THE HERITAGE OF ANCESTORS IS THE NEED OF THE HOUR”

breadwinner. Addiction deprives a person of such greatness and dignity, superiority, and makes everyone who is given to him become his own murderer. A person who falls into the trap of this vice becomes not only his own murderer, but also an enemy of universal human values and drags others into his unholy ranks. Every young man or woman who falls into the clutches of "Zahri Qabin" puts a tragic end to their life before reaching the age of 25-30. Our young people, with their healthy thoughts, creative potential, world-wide success in the fields of science, sports and art, and deep mastery of the ancient and modern trade secrets inherited from their ancestors, are striving for their fairy-tale days full of confidence and hope. Together with the spiritual and moral values inherited from their ancestors, they are achieving results that surprise the people of the world by restoring the values characteristic of various professions and taking a new approach to achieving more effective results. The image of the cities and villages of our republic is radically changing and being renewed, based on this, all our efforts to carefully preserve and pass them on to our future generations, realizing the essence of the values inherited from our ancestors, are reflected day by day in the morals of our youth, the restoration of our forgotten values and we see them achieve new successes by following them. As our young people learn historical, national and universal values and follow them boldly, our opportunities to implement our strategy to create a New Uzbekistan will become wider. Our nation, with its rich values, is able to protect our youth from any spiritual and ideological threats and aggressions.
